TECHNICAL SKILLS

Programming Languages: Python, JavaScript

Data Analytics: SQL, DBT, Snowflake, Databricks, Tableau, Excel

Artificial Intelligence: Prompt Engineering, LLM Integration, UAT and Evaluation, AI-assisted Data Analysis

Tools/Platforms: Claude Code, n8n, MCP Server, LLMs, Co-Pilot, Git, Azure DevOps, Confluence

IDEs: Cursor, VS Code

EXPERIENCE

Microchip Technologies

Phoenix, AZ

Analytics Engineer (Full-Time)

Sep 2023 – Present

- Spearheaded cross-functional collaboration with finance leadership and business stakeholders to architect technical solutions that converted strategic business requirements into production-grade data platforms, delivering transformative improvements in data visibility and operational efficiency across global teams
- Designed, developed, and maintain ELT/ETL pipelines and advanced analytical workflows for high-volume financial datasets; integrated statistical modeling, predictive analytics, and intelligent automation to produce reliable, scalable insights while significantly enhancing data consistency and reducing turnaround times
- Pioneered organization-wide AI-driven business process automation initiatives, achieving >50% operational efficiency gains and virtually eliminating human error through intelligent system redesign
- Engineered end-to-end AI solutions encompassing advanced prompt engineering, solution architecture, UAT, and production deployment, along with structured change-management frameworks and adoption strategies to ensure scalable rollout and rapid value realization
- Designed and developed custom full-stack applications using Claude Code to replace inefficient ERP and Tableau processes, creating intuitive, task-specific tools that streamline system interactions, automate repetitive processes, and improve user experience and efficiency across finance operations
- Developed and deployed a portfolio of internal Tableau dashboards for finance teams, including SOX-compliant reporting, enabling self-service access to real-time KPIs and operational metrics that support faster, data-driven decision-making
- Delivered executive-level presentations of complex insights, project outcomes, and strategic recommendations to senior leadership, translating technical results into clear, actionable business narratives that drove alignment and organizational change

School of Engineering, University of Pennsylvania

Remote

Head Academic Coach (Part-Time)

Aug 2022 – Present

- Offered comprehensive support to students enrolled in the CIT program's *Intro to Software Development* course, empowering them to grasp fundamental concepts and elevate their software development skills in Python and Java
- Conducted regular office hours and host review sessions, fostering an environment of active learning and aiding students in achieving a deeper understanding of course material
- Actively contribute to their overall growth and success by addressing not only academic matters but also providing guidance on personal well-being, effective time management, and individualized academic planning

EDUCATION

University of Pennsylvania, School of Engineering and Applied Science

Philadelphia, PA

Masters: Computer and Information Technology

Jan 2022 – May 2023

Relevant Courses: Software Development, Data Structures and Software Design, Algorithms and Computation, Database and Info Systems, Artificial Intelligence, Big Data Analytics, Computer Systems and Programming, Discrete Math

Arizona State University, School of Molecular and Life Sciences

Tempe, AZ

Bachelors: Biomedical Sciences and Biochemistry (Minor)

Aug 2017 – May 2021

Relevant Courses: Statistics, Calculus, Research Methods
